FLOW Screen Inspector

Welcome!

To help you ensure your device is in perfect condition, you'll find below six essential testing screens. Each screen is designed to highlight specific display attributes. You can use the buttons below to navigate to a specific testing screen.

Full Black Screen   To identify bright or white dead pixels clearly.

Full White Screen   To detect black or discolored dead pixels and assess overall screen whiteness.

Primary Colors   Helps check for color consistency and find pixels stuck on a single color.

Gradient Patterns   Gradual shifts from light to dark to detect uneven brightness or contrast issues.

Checkerboard Pattern   A grid of black and white squares to assess screen alignment, pixel clarity, and contrast accuracy.

Fine Line Patterns   Thin horizontal and vertical lines to test screen precision and detect any distortion or irregularity.
